**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Melissa Glauber on 9/22/09 and 9/30/09. Applicant agreed to cancel the following dependent claims, as they are not deemed to be further limiting due to the amendments to the independent claims filed 8/31/09. For example, in claim 13, a correlation coefficient maximum value display device is indistinguishable from a correlation coefficient display device for displaying a highest correlation coefficient. In addition, claim 11 is amended in order to clarify that the region defining device is utilized for calculating the correlation coefficient outside the ROI defined by the region defining device.

The application has been amended as follows:

Please cancel claims 2, 4, 5, 10, 13, 14, and 15.

Please amend claim 11 as follows:

11. An ultrasonic diagnostic apparatus comprising:
  - an ultrasonic probe;
  - a transmitting/receiving device for driving said ultrasonic probe to transmit

ultrasonic pulses into a subject and receive ultrasonic echoes from inside the subject and outputting received data;

an ultrasonic image producing device for producing an ultrasonic reference image from the resulting received data;

a reference image storage device for storing said reference image, said reference image comprising a region of treatment encompassed by a region of interest before providing medical treatment to the subject;

a scan condition storage device for storing a scan condition for said reference image;

an automatic scan condition setting device for reading said scan condition and setting said scan condition as a current scan condition before providing medical treatment;

a scan plane angular scanning device for acquiring a plurality of real-time images at different scan plane angles, said plurality of real-time images acquired after providing medical treatment;

an automatic region defining device for defining in said plurality of real-time images the region of treatment encompassed by the region of interest after providing medical treatment to the subject;

a correlation coefficient calculating device for calculating a correlation coefficient between a portion outside of the region of interest in said reference image and a portion outside of the region of interest in each of said real-time images [throughout or partially];

[an automatic region defining device for defining in said plurality of real-time

images the region of treatment encompassed by the region of interest after providing medical treatment to the subject;]

an ultrasonic image display device for displaying said reference image and one of said real-time images having a highest correlation coefficient side by side, and

a correlation coefficient display device for displaying said highest correlation coefficient.
